

PAINTED FURNITURE CARE INSTRUCTIONS

Thank you for your recent purchase. To ensure that your item remains in a beautiful condition, please follow the furniture care instructions provided. All water-based and oil-based furniture finishes need 21-28 days to cure (or even longer if there are several layers of wax); treat it with great care during this period and avoid excess handling or placing heavy items on its surface.

Once the surface has cured, here are some tips for looking after your furniture:

- Do not place water glasses, sharp or abrasive objects on the surface. Always use a coaster when placing items that contain liquids.
- When dusting, use a soft dry cloth.
- To obtain best results when removing unwanted stains, use a slightly damp cloth or chamois with mild soap and water; do not use any abrasive products or tools.
- Avoid the use of furniture polishes.
- Avoid excessive water; wax is by nature water resistant but will spot if not wiped immediately.
- Use place-mats and coasters on tabletops.
- A moderate climate is best - avoid extreme heat, as well as excessive moisture or dryness.

Care for your piece with these instructions and your painted furniture will give you enjoyment for many years to come!
